Face Brick Sizes

HEIGHTS and LENGTHS

All Figured Out

Compliments of

H. A. Woolery & Son

Indiana Limestone

Main Office, Quarries and Mills located at Bloomington, Ind.

INFORMATION

Use this schedule to find out heights or lengths any given number of face brick (of any standard size) will lay up in the wall.

Index lists one brick and one joint.

Pages 7 to 23 give heights.

Pages 25 to 31 give lengths.

Familiarize yourself with this little schedule and you will save a great deal of time figuring out your face brick problems in their relation to all other work affected by the face brick.

See Index on page 6.

SCHEDULE OF BRICK *LENGTHS*

Example:

Plans have been drawn for one size face brick and a different size brick and joint are being used.

Find the schedule of sizes that fits the brick by referring to Index Sheet No. 6. For instance, Brick and Joint being used 8⅝" long, Sheet No. 28 gives this schedule. Imagine that plans call for 8'-6" of Wall between two openings. From schedule we learn that 12 whole Brick and 12 Joints will work out 8'-7½" so are able to plan our wall to avoid chipping brick; either by changing location of openings slightly or by laying brick closer.

By use of these schedules, the Architect, Contractor, Brick Mason or Stone Contractor can save a lot of time and get the job right.
